VSLR INC. CLIENT REPORT

OVERVIEW

VSLR Inc. is pleased to submit this report about our client Tom, who has tasked us with the job of producing a website for the purposes of trading cards. Tom has contracted us to design and build a trading card game, which he claims is to promote gaming and community involvement amongst a wide range of users, whether it be casual players just starting out or long-term veterans.

The platform is meant to provide users with an easy to use, and visually appealing environment where they can browse, manage, and trade cards with other users. Furthermore, our focus will also be to make it so that the website is both mobile and desktop friendly, ensuring that it is inclusive for all users.

ABOUT OUR CLIENT

Name: Tom Ding

Affiliation: Freelance Web and Game Developer

Highly skilled and experienced, Tom needed a team with skill and dedication to completing the task.

Tom has contracted us to design and build a virtual trading card platform with the capacity to be expandable and entertaining. We have agreed to this goal and have begun planning out the platform.

THE OBJECTIVE

- **Need #1: People need an interesting, accessible website to trade on.**
- **Need #2: It needs to be visually consistent**
- **Need #3: Should be useable on all devices**

DEMOGRAPHIC

Who are our customers?

#1 Trading Card Fans

- **These are users who are in the TCG community or have previously been a part of the community.**
- **Catering to this demographic is a major priority since this will be the users that make a big portion of the users we are trying to cater towards.**
- **This portion of users are going to be the ones mainly interacting with the website's main features like card collecting and deck building.**

#2 Collectors

- **Users who enjoy collecting tradeable cards as hobbies.**
- **These are the users that will just want to collect cards based on visual appearance, rarity, and focus on completing their sets.**
- **To cater towards this demographic, we will need to ensure that there is a browsing feature for the cards and filtering system for the cards to ensure that they do not find the website a hassle to use and switch out to competing websites.**

#3 Curious Web Users

- **These are users that found the website through surfing the internet or through other links.**
- **These are users that most likely have no prior experience with the TCG community, so it is important to have clear instructions to help them become interested. Also having visually appealing, and easy to understand aspects will help greatly in garnering their interest.**

Device Type?

The Primary users of TCG players are a mix of both mobile and desktop users. Having it on a desktop is convenient for users trying to find specific cards and are a part of the more competitive side of the community. Whereas mobile players are more likely a part of the casual portion of the TCG community. So, it is important that we ensure that the website is easily accessible to both mobile and desktop users.

STATIC INFORMATION

- Game name and branding
- Rules and guidelines
- Card Rarity
- Terms of service
- Privacy policy

DESIGN ELEMENTS

Important Designs:

- **#1: Simple layouts that are visual vibrant and attractive**
- **#2: A faux market for example to make things interesting**
- **#3: An account cookies system to allow for saving data between uses.**
- **#4: Easily usable across different devices (mainly desktop and phones)**

- **#5: Easy navigation cards, decks, listings, etc...**
- **#6: Fast loading times, especially when users are searching for cards**

Designs to Avoid:

- **#1: Cluttered page with one too many effects, and animations everywhere**
- **#2: Using outdated design themes that do not relate with the TCG community**
- **#3: Having cards with inconsistent proportions/visuals (stretched or compressed visuals)**
- **#4: Confusing UI which makes navigation for users difficult**

DATA MANAGEMENT

User Data:

- **User accounts (Usernames, Emails, Profiles)**
- **Login Details**
- **Preference Settings**
- **Card Collection**
- **What cards does the user have in his/her deck?**

Card Data:

- **Individual Card Details (Rarity, Stats, Abilities, Artwork)**
- **Card Sets**
- **What group does this card belong to?**
- **Card Availability and Pricing**
- **Is this card currently available and how much is the market price for it?**

Deck Data:

- **User Created Decks**
- **Card Collection Progress**

Search and Filter Data:

- **Card Filters (Rarity, Set, Type)**
- **Sorting Options (Price, Popularity)**

Leaderboard System Data:

- **Top Collectors**
- **Most Active Users**

INTERACTIVE ELEMENTS

Tools

- **One big feature that our clients and many of the user will appreciate will be the use of deck building tool, which is very common in many TCG, and helps greatly for users wanting to build out decks.**
- **Secondly, having Advance Search/Filter Tool is a great QOL feature and is a very big deal breaker for many TCG fans as this allows them to search for cards they really like, or are missing in their collection.**

Card Features

- **Having a hovering animation for cards will give the users a much more interactive experience and help draw in key visuals of the card.**
- **Favoriting is another QOL feature that will be useful to users, as it makes it easy for them to find cards they really like and go back to them. This feature also works hand in hand with the Filter Tools as filtering by favorited cards make it easier for users to find the card again without the hassle of going through the searching process.**

Engagement Features

- **Having something like a daily trivia game will help encourage users to constantly keep coming back to, which helps to build a long-term user retention.**
- **Daily Rewards is another great way to keep users coming back to the website, as this encourages them to keep coming back daily in an attempt to get better rewards.**
